A system for managing a meeting, comprising: a server adapted for storing at least one data set. The server in communication with at least one user device, in which the system is adapted to receive at least one input from at least one user for upload to the server. The input generates at least one further data set which is assigned to at least one thread of a discussion automatically by the server in which each of the at least one threads relate to a respective discussion. The at least one thread comprises at least one comment and wherein the system is adapted to output a graphical display for at least a portion of the discussion based on the at least one input from the at least one user device. In this way when a further thread for a discussion is input, the system generates a further thread for the discussion.
